MCCC Hydroponic Hoop House & Care Closet Project

Growing skills. Growing collaboration. Growing fresh food for our MCCC community.

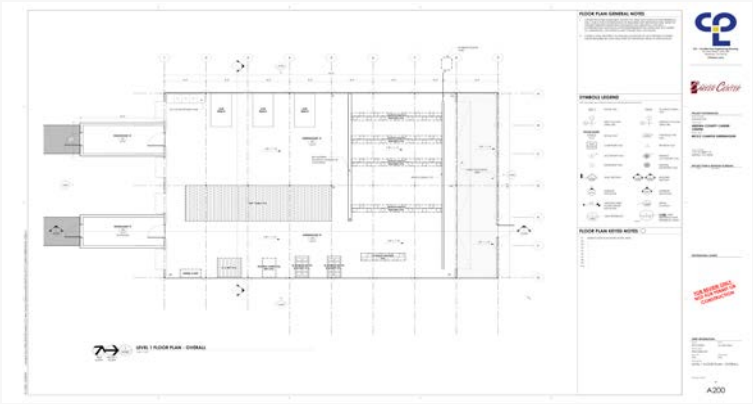

Fresh Food for the Care Closet

Students will grow **lettuce, tomatoes, and cucumbers** using hydroponic systems. The produce will be harvested and used to create **fresh salads for Care Closet students**.

Whole-School Engagement

The hydroponics lab will serve as a hands-on learning space for **lab and classroom collaborations**, creating opportunities for students across MCCC to participate in the growing process.

Designed for Hands-On Learning

The project plans include **two greenhouse spaces**, headhouse areas, hydroponic growing systems, work benches, nutrient infrastructure, and a three-compartment sink.

Project goal: connect career readiness, agriculture, science, food production, and service through an authentic school-based work experience.
